Cholesterol/HDL/LDL/Triglycerides

Test	Result	Unit	Ref. Range
Cholesterol	165	mg/dl	No risk <200 Moderate risk 200 - 240 High risk >240
Comments Primary sample: Serum Methodology: Enzymatic colorimetric assay in the presence pf peroxidase.			
Triglycerides (TG) in Serum	32	mg/dL	Normal<200
Comments Primary sample: Serum Methodology: Enzymatic colorimetric assay			
HDL Cholesterol	65	mg/dL	Optimum level ≥ 60 Borderline risk: 50-59 High risk: <50 mg/dl
Comments Primary sample: Serum Methodology: HOmogeneous Enzymatic colorimetric assay. LDL Cholesterol	94	mg/dl	Optimal <100 Near optimal 100-129
			Borderline high 130-159

Comments

Sample type: Serum Methodology: Calculation

*This is non-accredited test.

Cholesterol/HDL/LDL/Triglycerides

lest	Result	Unit	ker. kange
Non-HDL Cholesterol	100	mg/dL	very high >220 High 190-219 Borderline high 160-189 Near Ideal 130-159 Ideal for people at risk of heart disease <130 Ideal for people at very high risk of heart disease <100

Comments

Patients with elevated levels of non-HDL-C and normal levels of LDL-C, often have an increased number of LDL particles, increased apo B or increased small, dense LDL particles and these are associated with an increased risk of CVD. Therefore non-HDL-C might be more valuable indicator of cardiovascular risk than LDL-C.

The treatment goal for non-HDL cholesterol in persons with high triglycerides (>199 mg/dl) is 30 mg/dl higher than their LDL cholesterol goal.
