Molecular Biology

Test	Result	Reference Range	Methodology
COVID-19 by RT-PCR *	Not Detected (Negative)	Not Detected	Multiplex Real Time PCR
Sample Type: <i>Nasopharyngeal / Oropharyngeal Swab</i>			
Interpretation Notes :			
Result	Interpretation and Recommendations		
Detected (Positive)	If the result is detected, that means the sample is positive for SARS-CoV-2/Covid-19		
Not Detected (Negative)	If the result is not detected, that means the sample is negative for SARS-CoV-2/Covid-19.		
Presumptive Positive	Only one of the multiple genes is detected or a low viral load is possible. Request for repeat sample in 72-96 hours.		
The false-negative result with clinical symptoms may be caused by:			
· Unsuitable collection, handling, and/or storage of samples.			
· Sample outside of the viremic phase.			
We recommend repeating testing on a fresh sample.			
LIMITATION OF THE TEST			
· This assay has been validated for use with an oropharyngeal swab and nasopharyngeal swab samples only.			
· This assay only detects ORF1ab, N gene, and E gene.			
· This test cannot rule out diseases caused by other pathogens.
