DEPARTMENT OF RADIOLOGY AND IMAGING

USG - UPPER ABDOMEN

Report:

Liver: Normal in size and echotexture. The liver measures 15.2 cm in the mid hepatic line. No intrahepatic mass is seen. No dilated intrahepatic biliary radicles are identified. The portal vein and common bile duct are normal. Hepatic veins are normal.

Gallbladder: A physiologically distended gallbladder is noted filled with sonolucent bile. No intraluminal gallstones are seen. The gallbladder wall thickness is within normal limits. No pericholecystic fluid collection is seen.

Pancreas: Normal echotexture and dimension of the pancreas is seen. No pancreatic mass is identified. No peripancreatic fluid collection is detected. Distal body and tail obscured by bowel gas

Spleen: Normal splenic echotexture and contours are seen. No intrasplenic mass is identified.

Right kidney shows smooth contours with normal cortex and central echogenic complex. No renal calculi, hydronephrosis or renal mass is identified. Right kidney measures 10.0 cm x 4.6 cm.

Left kidney shows smooth contours with normal cortex and central echogenic complex. No renal calculi, hydronephrosis or renal mass is identified. Left kidney measures 11.3 cm x 5.9 cm.

Impression:

Unremarkable study.
