IMMUNOLOGY

Test	Result	Flag	Unit	Reference Range	Methodology
ANTI NUCLEAR ANTIBODY SCREEN (ANA)	Negative			Negative	Agglutination

INTERPRETATION NOTES :

This is only a screening test. A negative result does not necessarily rule out an autoimmune disorder. Further testing in form of ANA by IFA, monospecific ELISA to define single antigens, ANA immunoblot assay is recommended if clinical profile is suggestive.

RHEUMATOID FACTOR (QUANTITATIVE)	< 11.27	IU/mL	< 14.0	Immunoturbidimetry
			Please note change. Source: Roche IFU.	

INTERPRETATION NOTES :

Rheumatoid factors (RF) are a heterogeneous group of autoantibodies that are associated with the diagnosis of rheumatoid arthritis (RA), but can also be found in other inflammatory rheumatic and nonrheumatic conditions. This is a presumptive test, confirm with Anti-CCP test if needed. Clinical diagnosis should not be made on the findings of a single test result, but should integrate both clinical and laboratory data.
