H.pylori Abs - IgG	63.6 ^H	AU/mL	Negative: < 8 Doubtfull: 8 - 12 Positive: > 12	ELISA

A positive test result confirms the presence of specific antibodies.

A negative result indicates that no clinically relevant antibodies against the pathogen are present in the patient's sample, but does not exclude the possibility of an acute infection.

In case of a borderline result a reliable evaluation is not possible.

A definitive diagnosis can only be achieved by testing paired serum samples, taken at one to two weeks intervals, in parallel.

Remarks:

Test result to be interpreted in the light of clinical history and to be investigated further if necessary.
