

Ms. NISHA AMRATLAL FATANIA

PID NO : 46940

Age : 39 Years Sex : Female

Reference : DR. FARHAN

Sample Collected At :

CITICARE MEDICAL CENTER
Unit G03, Al Barsha South Bldg, Al Barsha South
Third, Dubai

VID : 5050109237

Registered on :

24-May-2025 10:09 PM

Collected on :

24-May-2025 07:24 PM

Reported on :

24-May-2025 11:17 PM

<u>Investigation</u>	<u>Observed Value</u>	<u>Flag</u>	<u>Unit</u>	<u>Biological Reference Interval</u>
* HIV I & II ANTIBODY AND P24 ANTIGEN (Serum, ECLIA)	0.203		S/CO	Non-Reactive: < 1.0 Reactive: = or > 1.0 Source: Roche IFU.

INTERPRETATION:

- A negative test result does not completely rule out the possibility of an infection with HIV. Serum or plasma samples from the very early (preseroconversion) phase or the late phase of HIV infection can occasionally yield negative findings. Yet unknown HIV variants can also lead to a negative HIV finding. The presence of antibodies to HIV is not a diagnosis of AIDS.
- For diagnostic purposes, the results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings.
- This is a screening test.

Reported on :

25-May-2025 09:27 PM

INTERPRETATION:

A "DETECTED" result indicates the presence of microbial infection. Clinical correlation is required for further follow-up.

A "NOT DETECTED" result indicates the absence of microbial infection.

Limitation of Assay:

- Interfering substances may affect the accuracy of this assay; results should always be interpreted in conjunction with clinical and epidemiological findings.
- This test is a qualitative assay.
