Date:23.06.2025	Patient Name:THOMAS KURUVILLA	Patient ID: 41310
Gender: M	Age: 55Y	Ref Physician : DR. AISHA

Abdominal and Pelvis Ultrasonography Examination

- The liver is normal in size with mild increased parenchymal echogenicity. Intrahepatic and extrahepatic biliary ducts are normal, no evidence of mass lesion.
Right lobe- 139mm (N= 120-160mm) Left lobe- 95mm (N= 100 mm)
- The gallbladder is fairly-distended and appears normal in size. No evidence of wall thickening, polyp lithiasis or pericholecystic fluid collection.
- Pancreas is normal in size with homogenous parenchymal echotexture, no evidence of calcification, focal lesion or peripancreatic fluid collection.
- Spleen is normal in size with homogenous parenchymal echotexture, no evidence of mass lesion.
- Both kidneys are normal in location, size and parenchymal echogenicity. Cortico-medullary differentiation is preserved, perinephric planes appear normal, no evidence of mass lesion. There are 3mm in sizes non-obstructive stones in both kidneys.
Right kidney- 110x41mm (cortex- 16mm)
Left kidney - 110x50mm (cortex-16mm)
- The urinary bladder wall thickness is normal, no evidence of diverticule or abnormal mass lesion in the wall and within the urinary bladder. No calculi seen.
Urinary bladder volume=786ml
Urinary bladder Post voiding volume=37ml (5%)
- The prostate gland is mildly large in size (36x45x41mm, volume=35ml) with small internal calcifications.
- No evidence of free fluid within the abdominal cavity and pelvic region.
- No evidence of bowel wall thickening, intussusceptions or any sign for acute appendicitis in this examination.

IMPRESSION:

- The liver is normal in size with mild increased parenchymal echogenicity, suggestive of mild (grade-I) liver fatty infiltration.
- There are 3mm in sizes non-obstructive stones in both kidneys.
- The prostate gland is mildly large in size (36x45x41mm, volume=35ml) with small internal calcifications and post voiding residual volume of 37ml (5%), suggestive of mild prostate gland hyperplasia.
