Date:10.08.2025	Patient Name: MA. FATIMA	Patient ID: 46962
Gender: F	Age: 29Y	Ref Physician : DR. KEERTHANA

Abdominal and Pelvis Ultrasonography Examination

- The liver is normal in size with mild increased parenchymal echogenicity. Intrahepatic and extrahepatic biliary ducts are normal, no evidence of mass lesion.
Right lobe- 148mm (N= 120-160mm) Left lobe- 102mm (N= 100 mm)
- The gallbladder is well-distended and appears normal in size. No evidence of wall thickening, polyp, lithiasis or pericholecystic fluid collection.
- Pancreas is normal in size with homogenous parenchymal echotexture, no evidence of calcification, focal lesion or peripancreatic fluid collection.
- Spleen is normal in size with homogenous parenchymal echotexture, no evidence of mass lesion.
- Both kidneys are normal in location, size and parenchymal echogenicity. Cortico-medullary differentiation is preserved, perinephric planes appear normal, no evidence of mass lesion. Normal pelvicalyceal systems and ureters. No evidence of lithiasis.
Right kidney- 104x41mm (cortex- 15mm)
Left kidney - 103x50mm (cortex-15mm)
- The urinary bladder wall thickness is normal, no evidence of diverticule or abnormal mass lesion in the wall and within the urinary bladder. No calculi seen.
Urinary bladder volume=460ml
Urinary bladder Post voiding volume=14ml (3%)
- The uterus is normal in size and volume with homogenous parenchymal echotexture (endometrial thickness of 5mm). No evidence of mass lesion.
- There are 5-6mm in sizes well-defined anechoic cysts in the peripheral region of both ovaries.
- No evidence of free fluid within the abdominal cavity and pelvic region.
- No evidence of bowel wall thickening, intussusceptions or any sign for acute appendicitis in this examination.

IMPRESSION:

- The liver is normal in size with mild increased parenchymal echogenicity (mild fatty infiltrations).
- There are 5-6mm in sizes well-defined anechoic cysts in the peripheral region of both ovaries (polycystic ovaries).
