We Promise We Care

Date:10.08.2025	Patient Name: MA. JOSEPHINE	Patient ID: 28568
Gender: F	Age: 47Y	Ref Physician : DR. KEERTHANA

Abdominal and Pelvis Ultrasonography Examination

- The liver is mildly large in size with mild increased parenchymal echogenicity. Intrahepatic and extrahepatic biliary ducts are normal, no evidence of mass lesion.
Right lobe- 162mm (N= 120-160mm) Left lobe- 118mm (N= 100 mm)
- The gallbladder is well-distended and appears normal in size. No evidence of wall thickening, polyp, lithiasis or pericholecystic fluid collection.
- Pancreas is normal in size with homogenous parenchymal echotexture, no evidence of calcification, focal lesion or peripancreatic fluid collection.
- Spleen is normal in size with homogenous parenchymal echotexture, no evidence of mass lesion.
- Both kidneys are normal in location, size and parenchymal echogenicity. Cortico-medullary differentiation is preserved, perinephric planes appear normal, no evidence of mass lesion. There are 3mm in sizes non-obstructive stones in both kidneys. There are mild fullness of the pelvicalyceal systems in both kidneys.
Right kidney- 112x44mm (cortex- 16mm)
Left kidney - 120x55mm (cortex-16mm)
- The urinary bladder wall thickness is normal, no evidence of diverticule or abnormal mass lesion in the wall and within the urinary bladder. No calculi seen.
Urinary bladder volume=313ml
Urinary bladder Post voiding volume=35ml (%)
- The uterus is normal in size and volume with heterogenous parenchymal echotexture having echogenic linear striations and irregular endometrial-myometrial junction (endometrial thickness of 9mm). No evidence of mass lesion.
- Ovaries are not seen clearly (TVS examination is advised).
- No evidence of free fluid within the abdominal cavity and pelvic region.
- No evidence of bowel wall thickening, intussusceptions or any sign for acute appendicitis in this examination.

IMPRESSION:

- The liver is mildly large in size with mild increased parenchymal echogenicity (mild fatty infiltrations).
- There are 3mm in sizes non-obstructive stones in both kidneys.
- There are mild fullness of the pelvicalyceal systems in both kidneys (Urine analysis advised to rule out UTI).
- The uterus is normal in size and volume with heterogenous parenchymal echotexture having echogenic linear striations and irregular endometrial-myometrial junction (uterine adenomyosis?)
