Your Health is our Priority

We Promise We Care

Date: 17.08.2025	Patient Name: RAFFY PRADES	Patient ID: 47616
Gender: M	Age: 47Y	Ref Physician : DR. KEERTHANA

Abdominal and Pelvis Ultrasonography Examination

- The liver is normal in size and parenchymal echogenicity. Intrahepatic and extrahepatic biliary ducts are normal, no evidence of mass lesion.
Right lobe- 131mm (N= 120-160mm) Left lobe- 80mm (N= 100 mm)
- The gallbladder is fairly-distended and appears normal in size. There are multiple 5-7mm in sizes non- mobile non-shadowing echogenic foci attached to the gallbladder wall. No evidence of wall thickening, lithiasis or pericholecystic fluid collection.
- Pancreas is normal in size with homogenous parenchymal echotexture, no evidence of calcification, focal lesion or peripancreatic fluid collection.
- Spleen is normal in size with homogenous parenchymal echotexture, no evidence of mass lesion.
- Both kidneys are normal in location, size and parenchymal echogenicity. Cortico-medullary differentiation is preserved, perinephric planes appear normal, no evidence of mass lesion. No lithiasis. The pelvicalyceal systems and ureters appear normal. There are 3mm in sizes non-obstructive stones in both kidneys.
Right kidney- 108x44mm (cortex- 16mm)
Left kidney - 109x52mm (cortex-16mm)
- The urinary bladder wall thickness is normal, no evidence of diverticule or abnormal mass lesion in the wall and within the urinary bladder. No calculi seen.
Urinary bladder volume=464ml
Urinary bladder Post voiding volume=35ml (7%)
- The prostate gland is normal in size and volume (35x39x31mm, volume=22ml), no evidence of mass lesion.
- No evidence of free fluid within the abdominal cavity and pelvic region.
- No evidence of bowel wall thickening, intussusceptions or any sign for acute appendicitis in this examination.

IMPRESSION:

- There are multiple 5-7mm in sizes non- mobile non-shadowing echogenic foci attached to the gallbladder wall (gallbladder polyps).
- There are 3mm in sizes non-obstructive stones in both kidneys.
